1. Utility of Basic Parts and Specification

Specification

Pumping Speed	200 ℓ/min		
Ultimate Pressure	Gas Ballast Closed	5X10-4 torr (6.7 X 10-2 Pa)	
oltimate Pressure	Gas Ballast Open	5X10-2 torr (6.7 Pa)	
	Standard	220VAC 1Φ 50/60Hz	
Power Input	Option	220VAC/380VAC 3Φ 50/60Hz	
	Customer's Request (Voltage, Frequency and Phase)		
Full Load Power	0.4 kW (0.5 HP)		
Motor Speed	1700 rpm		
	Standard	NW25	
Inlet and Outlet	Option I	Hose Nipple(Ф12 OD, Ф16 OD, or Ф26 OD)	
	Option II	Screw Nipple (3/8" Female)	
Oil Capacity	600 cc (0.6१)		
Weight	21 Kg		
Ambient Operation Temp. Range	7~40 °C		
Overall Dimension (mm)	150(W) X 434(L) X 251(H)		

2. Inspection

When you receive a pump, you need to check the pump is the same type you ordered. Please check there is any sign of loose bolts, spilt oil, and broken/loose Parts. If you ordered accessories for vacuum system please check them in the box.

3. Installation

1) Preparation

Select a well ventilated area, free of dust.

The pump should be placed conveniently to monitor the oil level of the pump.

We recommend the pump is operated in the temperature over 7 °C.

(We use vacuum oil named 'MR-200' as our default vacuum oil and it is best performance over 7 °C.)

2) Fastening

The pump should be tightly fastened to the ground or to a secure object so as not to be moved by the vibration of the pump. The pump should be installed and maintained horizontally all the time.

3) Connection by using Terminal box

① Open the Cover of Terminal box. You can see there is 6 cords connected.

② W2V20's motor is 3 phase one. You need to connect 3 external cords to the pump.

③ By referencing the Terminal box cover, you can connect the pump to power.

④ After finishing connection please do not connect the pump to the system and check the electronic connection is proper

or not. (If the connection is wrong motor will operate opposite and you need to change the connection)

4. Operation

1) Start up

Prior to start up, make sure that the line voltage and type of connections are appropriate.

(For all 200V motors, a "Delta" connection is applied initially)

Make sure that the oil level should be within the region between "LO" and "HI" marks.

(Ideally, 3/4 toward "High from "LO")

Never operate the pump in the condition which vacuum oil is below "LO"

In case of 3 phase line operation, make sure that the direction of motor rotation is the same as indicated on the body of the pump.

2) Emergency Stop and Power Failure

There is no need of a particular procedure to prevent from loosing vacuum in case of an emergency stop or power failure. The oil regulator build inside pump prevents Back-Flow of oil when the pump stops.

5. MAINTENANCE

1) Random inspection

Check vacuum oil frequently. You need to check whether the oil is brownish, dirty, or contains moisture.

Also you need to check the oil level always you start up the pump.

If oil level is lowered you can add oil to proper level. (Near "HI")

If oil has poisoned by any dust or water, you need to change the entire oil.

Procedure of Oil change is like below.

- ① To change oil, let the pump cool for about 5 minutes.
- ② Drain the contaminated oil completely through the drain plug (backside of pump).
- ③ Close the drain plug.
- ④ Fill the new vacuum oil (MR-200) through the oil filling plug and check the oil level.
- * The pump oil temperature should be typically less than 65 °C when operating.

2) Periodic Serviceable Items

- Vacuum Oil

Usually the circumstances are very important key of oil's life so there is no exact solution when you change the oil but usually we recommend you need to change the pump's oil like below.

Application	Chang oil within (Hours)
High Vacuum in Lab environment, or system seldom exposed to the air	2,500
High Vacuum in manufacturing environment, often exposed to the air	1,200
Vacuum furnace, large gas-exhaust diffusion system, system with booster pump.	600
Vacuum drier, vacuum molding, vacuum packing	200
Vacuum distillation, low vacuum tank	120

Again, we need to mention each system has differences so it is better for user to make own oil change plan.

- Oil Seal and other items

WSA supports 2 kinds of repair kits for maintain W2V20.

'Minor Repair Kit for W2V20' is for normal overhaul. Pump consists of various metal and rubber component and some component need to change periodically. Please check the list of Repair kit.

'Major Repair Kit of W2V20' contains vane and other important parts of the pump. Please check the list.

Overhaul is very important for improve pump's performance and pump's life time. We recommend user need to overhaul once a year.

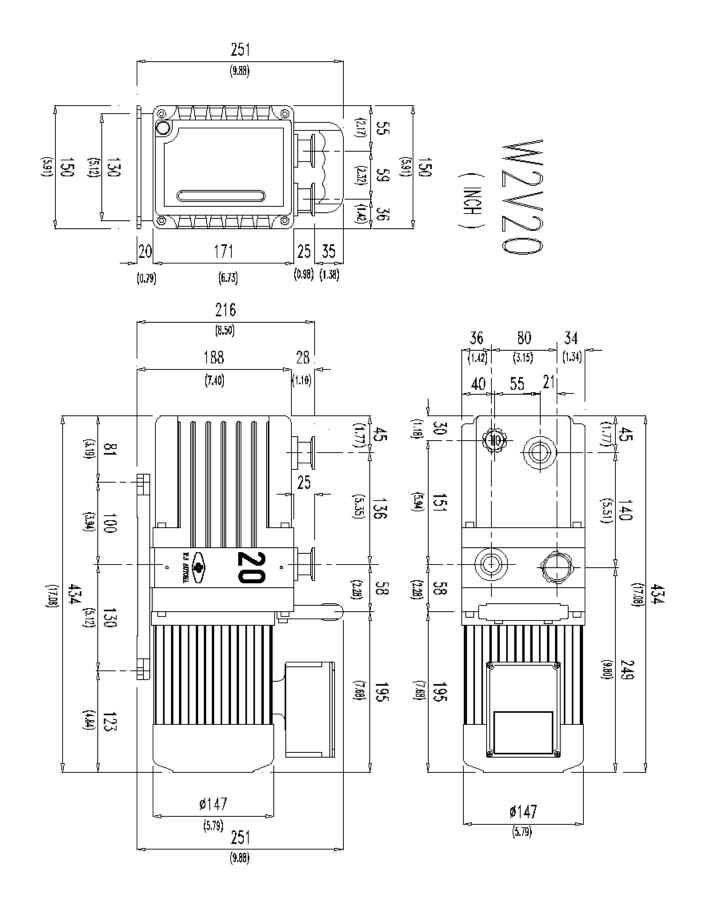

6. TROUBLE SHOOTING

SYMPTOM	CHECK	STEM TO TAKE
	Power line voltage and connections.	Correct voltage or connections.
Noisy motor would not turn	Any foreign materials inside the pump.	Remove the foreign materials, If problem with oil, change it.
	Motor (Open internal circuit).	
		Replace open windings.
	Any Foreign materials inside the exhaust	Remove the foreign materials
	valve.	
Noise and hot pump	Leakage in the system.	Fix the leakage.
	If leakage valve is open.	Close the valve.
	All the valves in the vacuum line.	Close if found open.
	Low oil level.	Add Oil.
	Leakage on the device connection.	Close the intake and recheck.
Vacuum Drops (get worse)	Moisture content of oil.	Change Oil.
(get worse)	Oil regulator.	Replace the Oil Regulator.
	If Gas Ballast is open.	Close the gas ballst.
	Worn out coupling mechanism.	Replace coupling.
Motor runs but Pump not.		
	Worn out key between motor and pump.	Replace the key and the set screws.
