

# D20 VICI Dual Layer Color-Coded PEEK™ Tubing

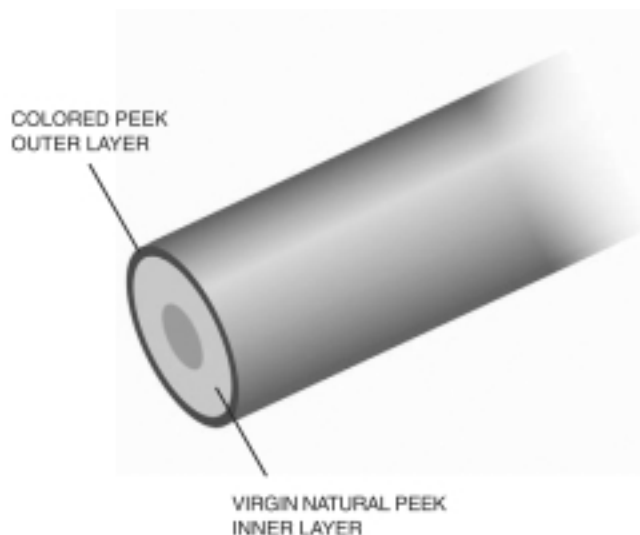

## Dual Layer Color-Coded 1/16" PEEK Tubing

- Inner layer of natural PEEK, outer layer of color-coded PEEK
- No possibility for stream to contact coloring agents.
- Pressure performance equivalent to single layer tubing.
- I.D.'s from 0.002" to 0.030",  $\pm 0.001$ "

## General Description

Our Dual Layer PEEK tubing eliminates any concern that a critical sample stream could be contaminated by pigments used to color code the tubing. It looks like any other color-coded tubing at first glance, but a closer look reveals that the pigmented layer surrounds a separate but integrally-bonded inner layer of natural PEEK.

## Specifications

The 1/16" OD tubing is available in OEM quantities with any ID you specify, from .002" to .030". Standard sizes are listed below. The ID tolerance of  $\pm 0.001$ " is equivalent to or better than that of tubing typically sold as premium grade. The tubing is available in a wide range of colors, striped or solid.

Dual Layer Color-Coded PEEK Tubing	
Color	ID
Red	.005"
Yellow	.007"
Blue	.010"
Orange	.020"
Green	.030"

Part No.	I.D.	Ext. Color	Price /ft
