

G16 Instrument Cleaning Supplies

New Dust-Off® Products - 100% ozone-safe - 100% effective

Dust-Off products safely and quickly remove loose dust, dirt and lint from virtually any surface ... cameras, lenses, enlargers, computers, copiers, fax machines, printers, video equipment, sewing machines, electric razors, CD equipment, binoculars, microscopes, drafting tables ... and more!

To meet a wide range of usage needs, Dust-Off brand products are available in two formulas. Dust-Off Special Application products have been formulated for use in especially sensitive environments, such as scientific research labs and other areas where flammability is a primary concern. Standard Dust-Off products are

completely safe for normal use, but they do contain some flammable elements. Both are 100% ozone-safe.

Broad product choices cover a variety of needs. For basic or casual use there is the disposable extra large Dust-Off XL. For more sophisticated use, we offer three valve systems and corresponding replacement canisters, including the original Dust-Off Chrome Valve System, the Dust-Off Plus 360° Vector Valve System and, for heavy professional use, the Dust-Off Pro with the Pro Gun and Flexible Hose System.

Dust-Off Plus® 360° Vector Valve®

Dust-Off Plus features the patented 360° Vector Valve - the innovative valve that can angle its moisture-free dusting power into places other dusters can't reach. It moves up and down 180° and swings in full 360° circles to blast harmful dust and lint away from very hard-to-reach places, providing superior dusting of precision office electronics, photographic equipment, delicate lab equipment, VCR's, CD's and more. Dust-Off Plus, Dust-Off Plus Special Application Formula and their refills, plus the separately available Dust-Off Plus 360° Vector Valve complete the system.

- 100% Ozone-Safe
- 360° Dust Removing Capability
- Pure Moisture - Free Power
- Variable Control - from a wisp to a blast
- Removable Valve - available in kit or separate
- Refills Readily Available

Dust-Off® Plus 360° Vector Valve, (blister carded)
